You can refine your search results by applying filters. Click the **All filters** button below the search box to display them.

The image shows a screenshot of the EBSCO Academic Search Ultimate interface. The search query is "(SU Information technology) AND (TX software engineering)". The results page shows two search results, both marked as "Peer reviewed" and "Academic Journal". The first result is titled "Prioritizing tasks in software development: A systematic litera..." and the second is "Análisis y revisión de softwares educativos para el aprendizaje entornos lúdicos.".

On the right side, a filter overlay is open, titled "All filters (2)". It shows "Active filters" with "Online full text" and "Past 12 months" selected. Under "Date Range (1)", the "Past 12 months" radio button is selected and highlighted with a red arrow. Other options include "All time", "Past 5 years", "Past 10 years", and "Custom range". At the bottom of the overlay are "Apply filters" and "Cancel" buttons.

Click the arrows to open facets and display the available filters. When you are finished making selections, click the **Apply filters** button to update your results.

# Conversational agents enhance women's contribution in online debates.

Published in: Scientific Reports, 9/4/2023, Academic Search Ultimate

By: Hadfi, Rafik; Okuhara, Shun; Haqbeen, Jawad; Sahab, Sofia; Ohnuma, Susumu; Ito, Takayuki

## Introduction

The advent of Artificial Intelligence (AI) is fostering the development of innovative methods of communication and collaboration. Integrating AI into Information and Communication Technologies (ICTs) is now ushering in an era of social progress that has the potential to empower marginalized groups. This transformation paves the way to a digital inclusion that could qualitatively empower the online presence of women, particularly in conservative and male-dominated regions. To explore this possibility, we investigated the effect of integrating conversational agents into online debates encompassing 240 Afghans discussing the fall of Kabul in August 2021. We found that the agent leads to quantitative differences in how both genders contribute to the debate by raising issues, presenting ideas, and articulating arguments. We also found increased ideation and reduced inhibition for both genders, particularly females, when interacting exclusively with other females or the agent. The enabling character of the conversational agent reveals an apparatus that could empower women and increase their agency on online platforms.

There have been significant advances in women's rights over the past decades, as many countries are constitutionally guaranteeing equal rights to all genders[ 1 ]. This progress remains, however, challenged in places where women have restricted access to services,
